Design a single index page that will serve as a hub for all your semester's projects.

As with most any webpage, the page and design must be **flexible or modular** to accommodate changing content, different screen resolutions, and various browsers. The changing content on this page will be a growing list of links to all of your semester's exercises and projects.

Style the page with an **embedded style sheet** that resides in the head of the html document.

Use **images and graphics** in the design. Be sure you own the copyright for any images and graphics used.

Use **rollover effects** for appropriate navigation.

Integrate an **absolute link** to the *MVCC homepage*.

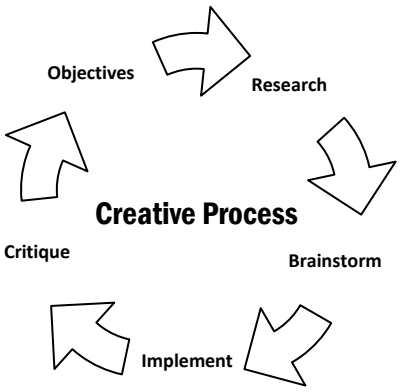
Designate an area where you insert your **article summaries (current and upcoming)** to the page.

The following **information** must appear on the page:

CG213 Graphic Design for the World Wide Web
Student Name
Semester and year
Class day and time

Also include **one paragraph** indicating the purpose of the page or link list.

Be sure you consider **visual hierarchy** and the order of importance for all of the page contents when designing the page.



Creative Process

Remember to perform an entire creative process for you project. Begin by identifying all the objectives for the webpage.

Develop at least **12 different initial design sketches** with appropriate brainstorming, thumbnailing, roughs, layout, color comping.

Prepare and submit a **PDF process notebook** which documents your entire creative process.

Export your process notebook as a pdf file (in less than 15 mb.) and upload it to the web server. **Create a hyperlink** on the index page that allows visitor to access the pdf file.

*The project will be evaluated on all the above criteria in **bold**.*
