Design a single page site that displays the features of a subject.

Due on November 7

Design a page that exhibits the MVCC campus. The page should help users navigate the campus and all the various building and describe the major functions and features of the campus.

You can use photos that are supplied, any photos you find of the campus, photos you take of the campus, and you should also generate your own graphics in any way that you want.

Include:

- Academic Building
- Payne Hall
- Jorgensen Athletic/ Events Center
- Alumni College Center
- Information Technology /Theater
- Science & Technology
- The general Residence Halls area

Code your web page in **html** and style it with a **linked style sheet.**

Your site must be optimized for desktop and mobile devices. Therefore, The CSS media query should be applied if your page is not a responsive design.

Images and graphics are required. Make sure imaging is well handled and presented in the best quality.

Creative Process

Remember to perform an entire creative process for you project. Begin by identifying all the objectives for the website.

Develop at least **12 different initial design sketches** with appropriate brainstorming, thumbnailing, roughs, and color comping. Sketch development may be executed digitally or on paper. Comprehensive rough, typography and color studies should be executed digitally with the programs of your choice.

Prepare and submit a **PDF process notebook** which documents your entire creative process.

*The project will be evaluated on all the above criteria displayed in **bold**.*
