Professional Transition With Apple Products

This course provides the student with the knowledge and skills necessary to utilize an Apple device as a productivity tool. The course will focus on the Apple iOS interface. The iOS interface is very different from the traditional Windows-based interface with which most have become comfortable. The student will learn to effectively control Apple devices without the use of a Mouse or a keyboard, and will learn the different menu structures and commands associated with the Apple iOS.

After the student achieves basic proficiency with the iOS, the student will explore the networking, printing, and backup options that enhance productivity. Finally, the students will explore the default apps provided with Apple Devices, and discover the wide range of productivity tools available from the AppStore.

Included in course is an Apple iPad with Retina Display 16GB with Cellular. Students will learn on these models and will be able to keep the equipment upon completion of course.
